Based on the main elements of play in Minecraft, Block Story makes the interface and the scene again, making the game as a whole more in line with the RPG style style, redesigned interface and game suggestions, reducing the superior difficulty of the game , compared to the original "minecraft", "Block Story" is easier to accept for players. Said previously, the use of Minecraft's script developed a lot of games, so why single to introduce this "Block Story"? In the collection of resources, the style of the original work is preserved and the progress of resource collection is shown through the ring-shaped progress bars and cracked lines on the articles. I believe every player wants to play their play works are a high degree of freedom, history is long, the elements of play and more, so Minecraft is born, which is a collection of adventure, construction, growth , collected in one of the first-person role games.
